MALICIOUS THREAT DETECTION -
Neutralize Malware, Ransomware & Phishing Threats.

Trusted by over 3,000 MSPs globally for their security needs, WebTitan DNS security layer automatically reduces malware risks by over 75%. With over 1.Sbn DNS requests a day, WebTitan's advanced DNS capabilities contextualizes data, only accepting what's safe and blocking potential threats.

Benefits of WebTitan Cloud

- Proactively protecting network uptime & remote/mobile/branch/roaming end users.
- Preventing internal employee breaches - C2 call backs from phishing links.
- Layered approach to security.
- Better protection for your employee from new and emerging threats.
- Significant reduction in security incidents.

Security

- AI-powered threat detection and protection, providing a key additional layer of security.

- Continuous updating of the URL classification database, with normal categories being updated hourly and more malicious content updated in real time.

- Blocking of domains regardless of HTTP or HTTPS.

Filtering

- Comprehensive set of predefined threat categories, with the ability to create custom categories.

- Highly accurate web content category matching, with over 99% accuracy.

- Threat categories are fully managed and updated using an AI-based classification engine, combined with human quality assurance, to accurately categorize and validate content.

Policies

- A filtering policy can be applied to a user, a user group, a location and/or a device.

- Domain allow and block listing on all policies.
